## The Incomparable Honeybee & the Economics of Pollination (Rmb Manifestos) By Reese Halter

From Dr. Reese Halter comes a remarkable, concise account of the honeybees that have profoundly shaped our planet for the past 110 million years. Honeybees are the most important group of flower-visiting animals, pollinating more multi-billion-dollar crops and plants than any other living group. Since prehistoric times humans and honeybees have been inextricably linked. This book is rich with interesting and humbling facts: -bees can count-they can vote,-honey has potent medicinal properties, able to work as an anti-inflammatory, antibacterial, antifungal, antioxidant, even an antisepticThe fate of the bees, whose numbers have been beleaguered most recently by colony collapse disorder, lies firmly in the hands of humankind. As such, it is our job to ensure their health, protect the habitats within which they live and communicate to others the vital link that human society shares with the remarkable honeybee.

I had always thought I had a thorough understanding of the role bees play in nature. But reading Dr. Reese Halter's book was a shocking revelation of the importance of bees in pollinating a wide variety of crops and plants, and thus their importance to our very survival. With amazing clarity and ease of understanding, Dr. Reese brings to light the vital role of bees in the pageant of all life on this planet. This is a must read for anyone concerned about the relationship of our ecology with our well-being. Thank you, Dr. Reese, for articulating the scientific knowledge in such an easily readable form. ---- Courtney Milne, Master Photographer, author of The Sacred Earth

In this book, Dr. Halter introduces us to the amazing honeybee. Not only do bees have sophisticated social organization and advanced communication and navigation skills, but they vote, dance and have strange sex. The book is written in a conversational style, with a myriad of interesting and often surprising facts (e.g., bees might be able to locate land mines and cure some cancers). The bee provides goodies for humans (e.g., honey, wax, medicines) but their main importance is as pollinators of food plants. Dr. Halter explains how bee populations recently have plummeted due to deforestation, contamination by insecticides, and disease. Our food supply is in peril. Dr. Halter presents a very convincing argument that we need to be doing a better job of looking after planet Earth. This is a good read, both informative and exciting. I thoroughly recommend it. -- --Roger Sands, Professor Emeritus, University of Canterbury
