**Death from the Skies!: The Science Behind the End of the World** By Philip Plait Ph.D.

With wit, humor, and an infectious love of astronomy that could win over even the science-phobic, this fun and fascinating book reminds us that outer space is anything but remote. The scientist behind the popular website [badastronomy.com](http://badastronomy.com), Philip Plait presents some of the most fearsome end-of-the-world calamities (for instance, incoming asteroids and planet-swallowing black holes), demystifies the scientific principles at work behind them, and gives us the odds that any of them will step out of the realm of sci-fi to disrupt our quiet corner of the cosmos. The result is a book that is both terrifying and entertaining?a tour of the violent universe we live in, written with an enthusiasm that every stargazer will appreciate.

### Editorial Review

#### From Publishers Weekly

Plait, an astronomer and author of the popular Web site [badastronomy.com](http://badastronomy.com), presents in loving detail the many, many ways the human race could die, from temperature extremes and poisonous atmosphere to asteroid impacts and supernovae explosions. Such a state of destruction existed some 65 million years ago, when a giant meteoroid struck Earth, sending up so much flaming debris that the whole planet caught fire and the dinosaurs were wiped out. Solar flare activity could bring on another Ice Age. Worse yet would be a gamma ray burster, a collapsed star whose radiation would be comparable to detonating a one-megaton nuclear bomb over every square mile of the planet. Plait discusses insatiable black holes, the death of the Sun and cannibal galaxies—including our own. Balancing his doomsday scenarios with enthusiastic and clear explanations of the science behind each, Plait offers a surprisingly educational and enjoyable astronomical horror show, including a table listing the extremely low odds of each event occurring. He gives readers a good scare, and then puts it in context. Illus. (Oct. 20)

#### From [Booklist](#)

Fans of disaster-from-space movies such as *Deep Impact* or *Armageddon*, or of science-fiction novels like Lucifer's Hammer, will definitely want to check out this lively yet also rather scary book by a noted astronomer and creator of the clever Web site [badastronomy.com](http://badastronomy.com). The book is basically a catalogue of astronomical catastrophes that could wipe out life on earth: asteroids, comets, supernovae, black holes, aliens, even our friendly sun. According to Plait, it is virtually inevitable that something will happen, perhaps not in the not-so-distant future, to kill us all—don't forget, it's already happened once, 65 million years ago (remember the dinosaurs?), and there have been several recent near misses. The thing to do is stop worrying about inevitabilities and start planning for them: find ways, for example, to turn asteroids off course before they hit us. The book is extremely informative: Plait explains not only what can destroy the planet but also how it would happen. It's a crash course in astronomy as well as a cautionary tale about the (possibly brief) future of our world. --David Pitt

#### Review

"[Plait] describes each doomsday scenario with glee. . . . Yet for all that, his book is strangely comforting."  
-*The Washington Post Book World*

"A surprisingly upbeat look at all the ways the universe can destroy us . . . Eminently readable."  
-*Kirkus Reviews* (starred review)

"The enthusiasm Plait has for his subject is not any morbid fascination with the upcoming bang or whimper, but with how much we know now about the universe around us, and he conveys this enthusiasm with pages full of wonder."

-*The Commercial Dispatch*

#### From reader reviews:

**Juan Higgins:**

The book Death from the Skies!: The Science Behind the End of the World can give more knowledge and information about everything you want. Exactly why must we leave the good thing like a book Death from the Skies!: The Science Behind the End of the World? A few of you have a different opinion about reserve. But one aim which book can give many details for us. It is absolutely right. Right now, try to closer with the book. Knowledge or information that you take for that, you are able to give for each other; you are able to share all of these. Book Death from the Skies!: The Science Behind the End of the World has simple shape but the truth is known: it has great and large function for you. You can appear the enormous world by open and read a e-book. So it is very wonderful.

**William Tietjen:**

Spent a free time for you to be fun activity to complete! A lot of people spent their sparetime with their family, or their particular friends. Usually they doing activity like watching television, likely to beach, or picnic from the park. They actually doing same task every week. Do you feel it? Do you need to something different to fill your own free time/ holiday? May be reading a book is usually option to fill your no cost time/ holiday. The first thing that you will ask may be what kinds of book that you should read. If you want to try out look for book, may be the book untitled Death from the Skies!: The Science Behind the End of the World can be excellent book to read. May be it is usually best activity to you.

**Robert Russo:**

In this era globalization it is important to someone to obtain information. The information will make professionals understand the condition of the world. The condition of the world makes the information much easier to share. You can find a lot of sources to get information example: internet, magazine, book, and soon. You can observe that now, a lot of publisher in which print many kinds of book. Typically the book that recommended to you personally is Death from the Skies!: The Science Behind the End of the World this book consist a lot of the information with the condition of this world now. This specific book was represented how can the world has grown up. The language styles that writer make usage of to explain it is easy to understand. The actual writer made some exploration when he makes this book. That's why this book acceptable all of you.

**Andrew Gillon:**

A lot of reserve has printed but it differs from the others. You can get it by online on social media. You can choose the best book for you, science, comedy, novel, or whatever by searching from it. It is named of book Death from the Skies!: The Science Behind the End of the World. You can include your knowledge by it. Without causing the printed book, it may add your knowledge and make anyone happier to read. It is most critical that, you must aware about guide. It can bring you from one place to other place.
