The Ecological World View By Charles J. Krebs

This new textbook fills an important niche by offering a lively overview of the principles of ecology for a broad range of university-level science and biology courses. Written for those who need to understand key ecological concepts but may specialise in other fields, it is filled with many vivid examples of topical issues and current events.

The Ecological World View briefly covers the history of ecology and describes the general approach of the scientific method, then takes a wide-ranging look at basic principles of population dynamics and applies them to everyday practical problems.

Each chapter clearly presents key concepts and learning objectives, combined with thought-provoking, open-ended questions to facilitate discussion.

Stimulating, appealing and written in non-technical language, this is an essential resource for understanding how the ecological world works.
