Undecidable Theories: Studies in Logic and the Foundation of Mathematics (Dover Books on Mathematics)

By Alfred Tarski, Andrzej Mostowski, Raphael M. Robinson, Mathematics

Undecidable Theories: Studies in Logic and the Foundation of Mathematics (Dover Books on Mathematics) By Alfred Tarski, Andrzej Mostowski, Raphael M. Robinson, Mathematics

This graduate-level book is well known for its proof that many mathematical systems—including lattice theory, abstract projective geometry, and closure algebras—are undecidable. Based on research conducted from 1938 to 1952, it consists of three treatises by a prolific author who ranks among the greatest logicians of all time.

The first article, "A General Method in Proofs of Undecidability," examines theories with standard formalization, undecidable theories, interpretability, and relativization of quantifiers. The second feature, "Undecidability and Essential Undecidability in Mathematics," explores definability in arbitrary theories and the formalized arithmetic of natural numbers. It also considers recursiveness, definability, and undecidability in subtheories of arithmetic as well as the extension of results to other arithmetical theories. The compilation concludes with "Undecidability of the Elementary Theory of Groups."

Editorial Review

About the Author

Polish mathematician Alfred Tarski (1901-83) ranks among the greatest logicians of all time. Best known for his work on model theory, meta mathematics, and algebraic logic, he contributed to many other fields of mathematics and taught at the University of California, Berkeley, for more than 40 years.
Tarski's student Andrzej Mostowksi worked at the University of Warsaw on first-order logic and model theory.
Tarski's University of California colleague Raphael M. Robinson built on Tarski's concept of essential undecidability and proved a number of mathematical theories undecidable.

Users Review

From reader reviews:

Michael Brown:

Nowadays reading books become more than want or need but also get a life style. This reading habit give you lot of advantages. The advantages you got of course the knowledge your information inside the book that will improve your knowledge and information. The data you get based on what kind of book you read, if you want attract knowledge just go with training books but if you want truly feel happy read one using theme for entertaining such as comic or novel. Typically the Undecidable Theories: Studies in Logic and the Foundation of Mathematics (Dover Books on Mathematics) is kind of reserve which is giving the reader erratic experience.

Fred Nelson:

The book with title Undecidable Theories: Studies in Logic and the Foundation of Mathematics (Dover Books on Mathematics) has lot of information that you can find out it. You can get a lot of benefit after read this book. This book exist new know-how the information that exist in this reserve represented the condition of the world now. That is important to yo7u to know how the improvement of the world. This particular book will bring you within new era of the globalization. You can read the e-book on your own smart phone, so you can read the item anywhere you want.

Donald Warren:

Beside this specific Undecidable Theories: Studies in Logic and the Foundation of Mathematics (Dover Books on Mathematics) in your phone, it could give you a way to get more close to the new knowledge or information. The information and the knowledge you are going to got here is fresh from the oven so don't be worry if you feel like an previous people live in narrow village. It is good thing to have Undecidable Theories: Studies in Logic and the Foundation of Mathematics (Dover Books on Mathematics) because this

book offers for your requirements readable information. Do you sometimes have book but you rarely get what it's facts concerning. Oh come on, that will not end up to happen if you have this in the hand. The Enjoyable agreement here cannot be questionable, similar to treasuring beautiful island. Techniques you still want to miss this? Find this book and also read it from currently!

Julie Long:

A lot of guide has printed but it is unique. You can get it by internet on social media. You can choose the best book for you, science, witty, novel, or whatever simply by searching from it. It is identified as of book Undecidable Theories: Studies in Logic and the Foundation of Mathematics (Dover Books on Mathematics). You'll be able to your knowledge by it. Without leaving the printed book, it may add your knowledge and make you actually happier to read. It is most important that, you must aware about e-book. It can bring you from one destination for a other place.
