Philosophical Issues in Psychiatry II: Nosology (International Perspectives in Philosophy and Psychiatry) By Kenneth S. Kendler, Josef Parnas

Psychiatric and psychological practice and research is critically dependent on diagnosis. Yet the nature of psychiatric diagnosis and the rules by which disorders should be created and organized have been highly controversial for over 100 years. Unlike simple medical disorders (like infectious diseases), psychiatric disorders cannot be traced to one simple etiologic agent.

The last two generations have seen major conceptual shifts in the approach to diagnosis with the rise of operationalized criteria and an emphasis on a descriptive rather than etiological approach to diagnosis. The interest in psychiatric diagnoses is particularly heightened now because both of the major psychiatric classifications in the world - DSM and ICD - are now undergoing major revisions. What makes psychiatric nosology so interesting is that it sits at the intersection of philosophy, empirical psychiatric/psychological research, measurement theory, historical tradition and policy. This makes the field fertile for a conceptual analysis.

This book brings together established experts in the wide range of disciplines that have an interest in psychiatric nosology. The contributors include philosophers, psychologists, psychiatrists, historians and representatives of the efforts of DSM-III, DSM-IV and DSM-V. Some of the questions addressed include i) what is the nature of psychiatric illness? Can it be clearly defined and if so how? ii) What is the impact of facts versus values in psychiatric classification? iii) How have concepts of psychiatric diagnosis changed over time? iv) How can we best conceptualize the central idea of diagnostic validity? And v) Can psychiatric classification be a cumulative enterprise seeking improvements at each iteration of the diagnostic manual? Each individual chapter is introduced by the editors and is followed by a commentary, resulting in a dynamic discussion about the nature of psychiatric disorders.

This book will be valuable for psychiatrists, psychologists and other mental health trainees and professionals with an interest in the questions and problems of psychiatric diagnosis, as well as philosophers and philosophy students interested

in the problems posed by psychiatry, particularly those working in the philosophy of science.

Editorial Review

Review

"This book addresses many fundamental issues regarding psychiatry and psychiatric diagnoses as well as the future of psychiatry. It is important reading for anyone in the field." -- Michael Joel Schrift, D.O., M.A., University of Illinois at Chicago College of Medicine, *Doody's*

"Those wanting a deep understanding of the tensions in psychiatric classification will gain much from this volume, an understanding that hopefully someone or some team will use to get psychiatric classification unstuck." -- *Journal of Clinical Psychiatry*

About the Author

The major focus of Kenneth's research is in the genetics of psychiatric and substance abuse disorders. Two major methodologies are used in this research. The first involves large population based twin samples. In these twins the aggregate role of genetic and environmental factors is addressed. The aim is to understand how these factors interact and correlate, and how, through development, the vulnerability to psychiatric illness and drug abuse is expressed. Samples have been taken from the Virginia Adult Twin Study of Psychiatric and Substance Use Disorders as well as Norway, Sweden and Holland. Kenneth's work has focused on a wide range of disorders including major depression, anxiety disorders, eating disorders, externalizing behaviors, alcoholism, and drug abuse. He has also worked towards understanding the genetic and environmental sources of comorbidity of psychiatric and substance use disorders.

Trained medical doctor always involved in philosophy of science, phenomenology, schizophrenia research and clinical work.
